Path Page Element

Rectangle Page Element

TextArea Page Element

The TextArea page element is great for efficient processing of text that does not require advanced formatting. It offers basic control over leading and paragraph spacing and include text continuation functionality. If all the text does not fit within the

TextArea Overflow Text

bounds of the TextArea the HasOverflowText method will return a true value. The GetOverflowTextArea method can then be called to create a new TextArea with the remaining text. This functionality makes it simple to span large amounts

 - Beans
 - String Bean
 - Lima Bean
 - Kidney Bean

Additional Page Elements

An **AreaGroup** represents a group of page elements with an area.

A **BackgroundImage** page element is used to add an image to the background of a page.

The **Group** page element is used for grouping page elements together.

The **LayoutGrid** draws a coordinate grid to the page.

A **TransformationGroup** can rotate and scale a group of page elements.

A **TransparencyGroup** can be used to add transparency to page elements.

An **Anchor Group** can have Page Elements within it. It can be anchored to the edge or margins of the page.
